Application for the Workforce Optimization / Strategies (Data Science) Internship

Dear Hiring Team,

I am writing to apply for the Workforce Optimization / Strategies Data Science Internship at Roche. The opportunity particularly interests me because it combines data analysis with practical and strategic decision-making. Roche's connection between science, technology and healthcare also fits my interdisciplinary background.

I am currently pursuing a Bachelor's degree in Data Science and Artificial Intelligence at the University of Applied Sciences and Arts Northwestern Switzerland. I previously studied Business Artificial Intelligence, where I gained knowledge of business processes and data-driven decision-making. My apprenticeship as a laboratory technician also taught me to work accurately, methodically and with a strong awareness of quality.

During my studies, I have used Python, Pandas, Matplotlib and Seaborn in several projects. For example, I developed a machine-learning system for energy consumption forecasting and anomaly detection using more than 13 years of data. I also created a reinforcement-learning trading system using DQN and PPO. Through these projects, I gained experience in data preparation, feature engineering, machine learning and the interpretation of results.

I bring curiosity, reliability and a structured approach to solving problems. My scientific, technical and business background helps me understand challenges from different perspectives. I am motivated to expand my data science skills and learn how data-driven insights can support workforce planning at Roche.

I would welcome the opportunity to discuss how my background and motivation could contribute to your team. Thank you for considering my application.

Yours sincerely,
Haris Salii
